

THINK GLOBAL, ACT LOCAL

Earlier this year, AMPCO METAL (AMPCO) signed a joint venture partnership with METAL INDUSTRIEL (MIC), which became a licensee producer of the AMPCO® specialty aluminum bronze group of alloys. AMPCO and MIC formulate so a closer and stronger partnership and developed a new bound between two leading companies: AMPCO gets access to one of the European leaders in terms of continuous and centrifugal casting capabilities and MIC gets access to technical and commercial expertise from one of the few brands available in the bronze industry. Further, this licensing partnership allows AMPCO to comply with all relevant environmental policies to which the Company subscribes. Our goal is to achieve continual improvement in product performance and minimize environmental impact of our operations and products. In line with this commitment this partnership allows the Company to reduce drastically its CO2 footprint by reducing emissions related to transportation of the goods with this access to a manufacturing base in Europe, without compromising in quality standards.

AMPCO METAL is an integrated producer and worldwide distributor of specialty copper-base alloys used in different market segments, such as metal production and forming, aerospace, oil and gas, automotive, electro-technical, plastics processing and general engineering.
