Thermal conductivity λ	W / m · K	46			
Electrical conductivity γ	m / Ω · mm²	5			
Electrical conductivity	% I.A.C.S.	9			
Specific heat c_p	J / g · K	0.45			

Assurances given with respect to properties or uses are subject to written approval from AMPCO METAL.

For material released per AMS 4640 specification, minimum hardness is not applicable as long as requirements for tensile are met.

AMPCO® 45 is a high strength alloy with mechanical properties beyond the range of commercial nickel-aluminium bronzes. This is due to its special manufacturing process.

APPLICATIONS:

AMPCO® 45 is recommended for heavy-duty high-loaded mechanical and corrosive applications. Typical applications involving abrasive wear, friction, deformation, chemical erosion include:

- aircraft bearings / bushings
- pump and marine shafts and wear rings
- valve spindles and seats
- machine tool parts

The spark-resistance properties make it suitable for safety tools and machine tool components in explosive environments.

Specification: AMS 4640, ASTM B 150
